                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to full length GENSET human nucleic acids encoding CC potentially secreted proteins. The nucleic acids and the polypeptides CC they encode may be used in the prevention, treatment and diagnosis of Cd iseases associated with inappropriate GENSET gene expression. For CC example, they be used to treat disorders associated with decreased GENSET CC geneme that affect the activity of GENSET or by supplementing the CC patients own production of GENSET polypeptides. Conversely, antisense CC nucleic acid molecules may be administered to down regulate GENSET CC expression. The sense and antisense nucleic acids may also be used as DNA CC patients may be in need of restorative therapy. The GENSET polypeptides of CC similar nucleic acid sequences in samples, and hence to determine which CC patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to CC identify modulators (agonists and antagonists) of GENSET polypeptides conversion and activity. The present sequence is a GENSET mucleic acid of the invention
                                                                                                                                                                                                                                                                                                                                 Best Local Sim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to the DNA and protein sequences of novel isolated CC polynucleotides 80090, 52874, 52880, 63497, or 33425 encoding novel CC fucosyl transferase, seven transmembrane receptor, or Rho GTPase-CC activating protein (RhoGAP) family members. The DNA and protein sequences CC of the invention are useful for identifying a compound capable of CC treating a disorder by aberrant expression of the nucleic acid or the CC diagnosis. The invention also comprises a method for treatments and in CC diagnosis. The invention also comprises a method for treatments and in CC diagnosis. The invention also comprises a method for treatments and in CC diagnosis. The invention also comprises a method for treatming a disorder cusing a modulator of the proteins activity. This method is useful for CC cardiovascular (including endothelial cell), haematopoieteic, blood coversel and brain disorders. It is also useful in treating pain and CC protein sequences are also useful in treating proliferative disorders (e.g. acute leukaemia), cardiovascular disorders (e.g. cardiac CC e.g. acute leukaemia), cardiovascular disorders (e.g. cardiac CC hypertrophy, myocardial infarction, rheumatic fever), endothelial cell disorders (e.g. psoriasis, Crave's disease, rheumatoid architis), CC disorders (e.g. psoriasis, Crave's disease, rheumatoid architis), CC disorders (e.g. psoriasis, Crave's disease, rheumatoid architis), CC crom's disease, asthmal, blood vessel disorders (e.g. Kaposi sarcoma), CC degenerative disorders (e.g. Alzheimer disease), and hormonal disorders. The sequences of the invention are also useful as query sequences. CC represents the cDNA sequence encoding the human 80090 protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
